See how PSDS lets you import, manage your photos and print your Sublimation Products in one simple, integrated workflow.

Special Processing: mosaics.

Creating mosaics on different materials of varying dimensions, with your best photos, has never been so simple and immediate.

Even for the realization of the mosaics PSDS simplifies all operations. It drives you step by step throughout the process.

Jobs with the standard applications would be very complex, they become rather simple for everyone. The wizard process is in 3 easy steps: the choice of material on which it will transfer the composition, size of each piece, the quantity of pieces (indicating how many pcs, how many rows and columns).

The details make the difference.
PSDS helps not only in composition but also in the distribution of cuts on the management of borders, on the reprinting of pieces that were damaged during the transfer operations.

PSDS provides for each piece the information and contact details (always know where to place it), with the helps of cutting registration marks it simplifies the process of fixing and transfer.

The simplicity is not a detail.
Every little detail is taken care of, composition by always careful to highlight what is the main feature of PSDS, make simple operations more cumbersome and complex.
